

UMWELTPOLITIK

VERSION 1.0

The preservation of our natural environment and the foundations of life for future generations is a matter of particular importance to our company. We do not see ecology and economy as opposites, but rather as a significant partnership that should influence and develop each other through synergistic interaction.

We are therefore committed to continuously improving the environmental situation within our company through the environmental policy outlined here and to taking all measures within our power to achieve this goal.

ottomisu pursues the following principles with regard to environmental policy:

1. Environmentally responsible behaviour is not solely the responsibility of management. Our employees are encouraged to adopt environmentally conscious and energy-saving practices. Our managers are expected to demand and promote such behaviour at all levels.
2. We train and inform all employees in order to strengthen environmental awareness both within and outside the company.
3. By voluntarily introducing environmental management in accordance with DIN EN ISO 14001, ottomisu is strengthening its already exemplary efforts towards effective and sustainable environmental protection.
4. We comply with all legal regulations. The effectiveness of our environmental management system is regularly monitored through self-assessment processes.
5. We regard it as our responsibility to examine, monitor and assess the impact of our activities and projects on the environment, insofar as this is feasible both in terms of content and organisation, as well as being economically justifiable, in order to avoid or minimise negative effects. Furthermore, we encourage our clients to have us evaluate and optimise the ecological impact of joint projects on the carbon footprint, and, if desired, to have unavoidable CO₂ emissions offset in a credible and sustainable manner.
6. We regularly monitor and assess our consumption of resources, as well as the generation of waste, wastewater, energy usage, and our carbon footprint. We work to reduce these in line with our environmental policy objectives and economic capabilities.
7. We inform our contractual partners and suppliers about our environmental policy and strive to expand requirements to include environmental aspects through ecological procurement guidelines.
8. To ensure the continuous improvement of environmental protection, the company sets specific environmental objectives and determines the means and measures required to achieve them.

UMWELTPOLITIK

VERSION 1.0

The continuous improvement of our agency's environmental performance is the responsibility of all employees. In order to achieve this goal, our managers are tasked with communicating the environmental policy and promoting environmental awareness among staff at all levels. The environmental management system ensures the conservation of resources and has a positive effect on both the environment and the company's CO2 balance.
